Stakeholder Power–Interest Matrix

AspireX — Stakeholder prioritization & engagement plan

1. Purpose

Prioritize proposed stakeholders by their assumed power to influence AspireX decisions and their interest in the project. The matrix is an analysis hypothesis for a fictional portfolio case study.

2. Four-quadrant matrix

HIGH POWER / LOW INTEREST KEEP SATISFIED	HIGH POWER / HIGH INTEREST MANAGE CLOSELY
University career guidance unit (potential sponsor / institutional owner)	Project owner / BA System administrator (proposed)
LOW POWER / LOW INTEREST **MONITOR** **No core stakeholders currently assigned**	LOW POWER / HIGH INTEREST KEEP INFORMED University students; Fresh graduates; Career advisors; Career guidance analyst

Matrix reading: columns distinguish low versus high interest within each power band; the upper row contains high-power stakeholders and the lower row contains low-power stakeholders. Ratings are provisional.

3. Stakeholder classifications

Stakeholder	Power	Interest	Strategy
University students	Low	High	Keep informed
Fresh graduates	Low	High	Keep informed
Career advisors	Low	High	Keep informed
University career guidance unit	High*	Low	Keep satisfied
System administrator	High*	High	Manage closely
Project owner / BA	High	High	Manage closely
Career guidance analyst	Low	High	Keep informed

4. Engagement strategies

Quadrant	Action
Manage closely	Consult on decisions, data access rules, requirements and design reviews.
Keep satisfied	Provide concise milestone updates and seek input on reporting goals.
Keep informed	Share prototypes, clarify needs, and invite feedback on usability and metrics.
Monitor	Reassess if new departments or external parties become relevant.

5. Power BI-specific consideration

The Career Guidance Analyst is treated as high-interest and low-power because they would use aggregate dashboards but are not assumed to control project funding or scope. Data privacy and reporting permissions require review by the proposed administrator and project owner.

6. Validation note

No stakeholder interviews or formal governance review have occurred. The university career guidance unit and system administrator are illustrative roles; their assigned power may change in a real organization. This is not evidence of institutional sponsorship.
